documenos

MODULE

Enterprise Drive System

Always in Sync | Folder Sharing | Document Editors | On Your Own Server

Get to Know Documenos® Drive File Management.

Do you need a product like Google Drive, Dropbox or OneDrive that runs on your organisation's own file storage systems, where your employees can save the sensitive data they produce in their work and share it securely with each other or with external users? Documenos® is an application built for your business.

Documenos® Drive File Management lets your employees store and manage their files securely without depending on the cloud. It secures internal and external file sharing, and allows Word and Excel files to be created and edited from a web browser.

Secure Sharing
Time-limited, capped and tracked share links

Fast Search
Search inside the file, not just its name

Event Log
Every upload, download and deletion in the unified event log

Always in Sync

Drive for Documenos Desktop lets you access your files directly from your computer. Spend less time waiting for files to sync and more time being productive.

Windows Application
Download and install the desktop application; your Drive folders appear on your computer like any other folder.

Pairing Via QR Code
Connect the device to your account with a QR code or a link, and manage your connected devices from a single list.

Two-Way Sync
Adding, updating, renaming and deleting folders and files are synchronised in both directions.

Features

Our customers' favourite features

documenos

Folder Sharing

Share a folder with a Documenos® user or an email address, as read-only or read-write. External users receive their password by email and access the folder from their own page. You can set an expiry date and a folder quota for the share.

File Link

Send a file to users, to the members of a group, to email addresses or via a public link. The link can be valid from 1 hour up to 1 year, the number of downloads can be limited, and every download is logged with its time and IP address.

Secure File Sharing

You can manage secure file sharing between users or with external users.

File Storage Alternative

It provides a storage solution similar to Google Drive or Dropbox that runs on your on-premises servers.

Managing Deleted Files

It provides a recycle bin for deleted files; you decide how many days deleted files are kept.

User-Based Storage Quota

Set a default quota for all users and define user-specific quotas where needed; everyone sees the space they use on their own screen.

Editing Office Files

There is no need to install office applications for your users. Word and Excel files can be created, edited and printed directly from the web browser.

Multiple File Format Support

It supports viewing a wide range of file types in the web browser, including documents, photos, videos and other media files.

Drive Access Statistics

It provides statistics that let you monitor Drive usage and the space used by file type.

Search Capabilities

It provides easy access to files by searching within file content and the text in images.

Download for Free

See the full module and its screenshots on our website.

Files That Open in the Browser

Search does not look only at the file name: the content of PDF, Office and text files, the text in images (OCR) and video metadata are indexed during upload.
