MODULE

Quality Standards Management System

Comprehensive Tools | Revision Management | Manage with Ease | Detailed Quality Reports

Discover Documenos® Quality Management.

The purpose of the Quality Management Module is to provide companies/institutions with the toolset they need to manage their quality standards. With the Quality Management Module, all international or national quality standards (ISO, CE, TÜV, DIN, BSI, AFNOR, UNI, JIS, GOST, UNE, AISI, SAE, ASTM, TSE, etc.) can be managed easily and flexibly.

It has a functional infrastructure that allows you to manage all quality standards together, and it is flexible. Prepare documents, files, forms and any kind of content, create revisions, manage citations and related clause numbers, manage reviews, submit for management approval and publish on the internet or intranet. Documenos® is your partner in quality excellence.

The Life of a Quality Record

1

Create

By free text, from a form template or by uploading files from a folder; the quality record code is assigned automatically.

2

Get It Approved

A template-bound approval chain; steps completed by click, one-time code, password or electronic signature.

3

Publish

Publish the record in the relevant quality folder; if you wish, also publish the folder on the internet without requiring sign-in.

4

Revise

Open a new revision from the published record; once approved, it replaces the old revision.

Features

Our customers' favourite features

documenos

Revision Tracking

Records every revision of documents and provides access to previous versions.

Audit Preparation

Helps you prepare and organise the quality documents required for internal audits.

Version Publishing

Enables revised quality documents to be published within the organisation.

Approval and Signature Chain

By creating approval and signature processes on documents, it lets you authorise the creation, editing, review and approval stages of quality documents exactly as you wish.

Related References and Clause Numbers

Add the standard's related clause numbers and the cited document codes to each record; track broken references in a report.

Access Control

Controls access to quality documents so that only authorised users can view them.

Folder Management

Lets you manage and share all content related to quality standards in folders.

Detailed Search

Detailed and full-text search across quality records; published, all and cancelled records in separate lists.

29 Ready-Made Quality Forms

Templates are loaded automatically for every new company and can be used as they are or adapted to your organisation. Values such as risk score, weighted supplier score and calibration deviation are calculated automatically within the form. The templates reference ISO 9001, 14001, 45001, 27001, 27701, 22000, 50001, 10002, ISO 2859-1 (AQL), KVKK and GDPR. Ready-made templates are also available for procedures, work instructions and policy documents.
